VERACITY

Autonomous Inventory Discrepancy Resolution for SMEs

Eliminating inventory shrinkage and manual evidence gathering with deterministic rules and AI-assisted decision auditing.

Target Audience
Small & Medium Retailers

Key Innovation
100% Deterministic Decision Passports

Core Tech Stack
React, Express, Python Engine, SQLite

THE PROBLEM

Inventory Shrinkage Destroys SME Profitability

Invisible Stock Bleed

Unexplained physical stock shortages cost SMEs up to 3% of total revenue annually due to unrecorded damage and theft.

$100B+

Annual global retail shrinkage loss

Manual Paper Trails

Reconciling discrepancies requires hours of manual cross-referencing between paper delivery dockets, loss logs, and invoices.

12+ Hrs

Weekly manager hours lost on manual audits

Zero Audit Accountability

Adjustments are applied directly to ERPs without structured justification or immutable decision snapshots for store owners.

0%

Audit trail visibility in legacy SME tools

THE PROPOSED SOLUTION

Veracity: Zero-Hallucination Inventory Resolution

1. **Automated Discrepancy Detection**
   Instantly calculates expected versus physical stock counts across multiple store locations.

2. **Evidence-Backend Workflow**
   Attaches mandatory digital evidence (invoices, damage photos, delivery receipts) to every case.

3. **Deterministic Decision Passports**
   Generates structured, replayable decision passports ensuring 100% auditability and compliance.

TRUST & VERIFICATION

"By separating business logic from generative guesswork, Veracity guarantees 100% deterministic decision accuracy."

Designed specifically for high-compliance SME operations.

ARCHITECTURE & TECH STACK

End-to-End System Architecture Overview

Frontend Tier

React 19.1.0 + TypeScript 5.9.3 + Tailwind CSS 4.3.3 (Vite 7.3.6)

Role-gated UI (Staff, Manager, Owner) for stock count submission, photo-count review, crate tracking & Decision Passports.

API Gateway

Express 5.3.0 REST Gateway (Node.js)

Handles authentication, photo preprocessing (Sharp 0.35.5), payload validation, and forwards core requests to Python backend.

BACKEND TIER – CORE

Python 3.10+ Standard Library

Applies role checks, calculates expected stock, evaluates deterministic rules & stores audit records.

BACKEND TIER – VISION AI

RunPod GPU + OWLv2 / Local Sharp Counter

Runs zero-shot object detection (`POST /api/vision/count`) with human-in-the-loop staff review.

Storage Tier

SQLite + Replit Private App Storage

Embedded SQLite database for movements & audit trails; isolated storage for evidence upload files.

UN SDG ALIGNMENT

Driving Responsible & Sustainable Growth

SDG 8

Decent Work & Economic Growth

Achieve higher economic productivity through technological upgrading, transforming 45–minute manual checks into structured <9–minute reviews.

Target 8.2: Technological Upgrading for SMEs

SDG 9

Industry, Innovation & Infrastructure

Increase access of small-scale enterprises to financial and value-chain services by providing enterprise-grade auditability via Decision Passports.

Target 9.3: SME Financial & Value Chain Integration

FEASIBILITY & IMPLEMENTATION

Zero Infrastructure Overhead

Replit Hosted

Instant, browser-based cloud deployment with zero local software installation required.

Isolated Data

SQLite database and Replit App Storage guarantee local, air-gapped data safety.

Zero API Cost

Deterministic Python engine operates locally without recurring LLM or cloud API fees.

MEASURABLE IMPACT

Transforming SME Inventory Operations

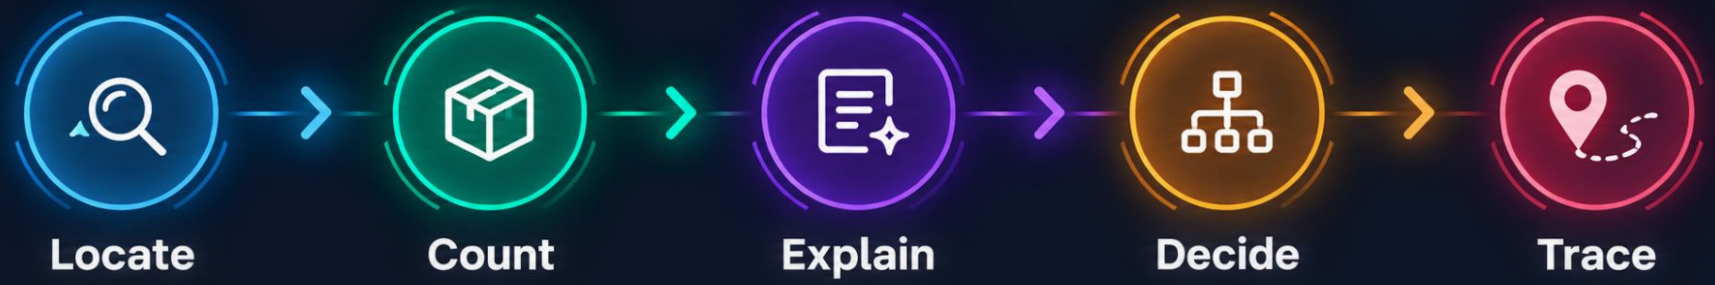

85%
Reduction in Investigation Time
Automated evidence cross-referencing speeds up audit resolution from days to minutes.

100%
Audit Trail Traceability
Every single inventory adjustment is backed by an immutable Decision Passport.

$14,000
Average Annual SME Savings
Prevented shrinkage, eliminated paper waste, and saved managerial hours.

0%
AI Hallucination Risk
Deterministic execution guarantees reliable stock count numbers every time.

Veracity

Bringing enterprise-grade transparency and deterministic resolution to SME inventory management.

Live Prototype Ready | Replit Hosted
